

INVESTMENT REPORT

TENNESSEE CONSOLIDATED RETIREMENT SYSTEM

**Third Quarter
Fiscal Year 2011 - 2012**

January 1, 2012 – March 31, 2012

**Prepared for:
Board of Trustees**

June 29, 2012

Investment Advisory Council

Pursuant to T.C.A. Section 8-37-108, the State Treasurer shall nominate, with the advice and consent of the Board of Trustees, the Investment Advisory Council, comprised of five senior investment professionals in the Tennessee investment community, who shall have at least five years professional experience as a portfolio manager, economist or an investment advisor in any field of which investments of TCRS funds are authorized. The term of appointment is for five years. Also, the treasurer may nominate two (2) additional members for three year terms.

The TCRS investment staff consults quarterly with the Advisory Council on a formal basis for strategy and guidance, and on an informal basis as needed.

The current members are as follows:

<u>Council Member</u>	<u>Expiration of Term</u>	<u>Appointed Term</u>
Frederick S. Crown, Jr., CFA 124 Longwood Place Nashville, TN 37215 Phone: 615-385-3753 E-mail: crownfl@gmail.com	June 30, 2012	5 year
Henry J. Delicata Park Street Capital One Federal Street, 24 th Floor Boston, MA 02109 Phone: (cell) 617-347-8854 / (office) 617-897-9252 E-mail: hdelicata@parkstreetcapital.com	June 30, 2014	5 year
Susan Logan Huffman, CFA Managing Director Reliant Investment Management, LLC 6077 Primacy Parkway, Suite 130 Memphis, TN 38119 Phone: 901-843-0600 / Fax: 901-843-0325 E-mail: shuffman@reliantllc.com	June 30, 2016	5 year

Minutes from the Investment Advisory Council Meeting June 6, 2012

Mr. Michael Brakebill, Chief Investment Officer, convened the meeting at 10:00 a.m. in the 11th Floor conference room of the Andrew Jackson State Office Building. Investment Advisory Council (IAC) members present were Mr. Fred Crown, Mr. Chuck Webb, and Mr. George Stadler. Mr. Henry Delicata participated via conference call and Ms. Susan Huffman was unable to attend. Investment staff members present were Michael Brakebill, Andy Palmer, Mike Keeler, Peter Katseff, Lamar Villere, Tim McClure, Roy Wellington, Jim Robinson, Carrie Green, Daniel Crews, Kushal Gupta, Ken McDowell, Thomas Kim, Matthew Haitas, Michael Giggie, Eric Stewart, Phil Payne, and Rhonda Myers. Mr. Bill Abney and Ms. Alison Cleaves were also in attendance.

Mr. Brakebill reviewed the investment performance which was illustrated in the Investment Report for March 31, 2012 and in the Strategic Investment Solutions (SIS) quarterly performance report. He noted the total return of TCRS was 7.0% for the quarter and 8.3% for the year. Before discussing the SIS Asset Liability Study, Mr. Brakebill made a couple of announcements. He introduced two new interns, Eric Stewart and Phil Payne, who will be with TCRS for the summer. Eric Stewart will be graduating with an MBA from Vanderbilt University in December. Phil Payne will be graduating in December with an MBA from the University of Tennessee at Knoxville. Mr. Brakebill also informed the IAC that Ms. Alison Cleaves was in the process of developing a memo regarding procedures for treating potential conflicts of interests from current IAC members.

Mr. Brakebill reviewed the SIS 2012 Asset Liability Study Summary. He emphasized that the summary distributed was a draft and that he had held preliminary meetings with The Treasurer to review the draft. The final version will be distributed by SIS in the third quarter. Mr. Brakebill walked through the key points of the Summary produced by SIS. He noted that SIS provides an expected return and risk for each asset class that is investible by TCRS. SIS uses historical data as well as the Capital Asset Pricing Model to project expected returns and risk levels. SIS uses this information to project returns under asset allocations of different risk levels. Staff plans to review the results of the study with The Treasurer and the Investment Committee to determine if any changes in allocation will be implemented.

Mike Keeler moved the discussion to domestic equities. He noted that domestic equities performed in line with the S&P 1500, aided by strong relative performance in the Sector Fund. An underweight to Canada contributed to outperformance relative to the custom North American benchmark. Growth and size factors were successful in adding value during the period.

Mike Keeler noted that the Mid Cap Fund lagged the S&P Mid Cap 400 primarily due to poor stock selection in the diversified financials, commercial and professional services and machinery industries. However, this underperformance was somewhat offset by good stock picking in the consumer staples sector and the energy sector. He noted that an underweight position in technology and an overweight position in the relatively weak consumer staple and energy sectors also hurt relative performance during the quarter. Faulty sector allocation contributed to roughly 70% of the shortfall against the benchmark. Looking ahead, stocks appear to have entered a

trading range as growth visibility is limited, but some of the worst problems from last year seem to be eroding slowly. In the current quarter, growth and quality factors seem to be reasserting themselves after a heavy “risk on” influence in the first quarter. He noted that earnings are generally coming in above or around expectations but investors’ reactions are somewhat tempered by cautious management commentary and guidance and also sometimes overshadowed by headlines related to European and Chinese economic data.

Jim Robinson moved the discussion to the Quant Fund. He noted that a high percentage of portfolio managers underperformed in calendar 2011. This underperformance led to higher than normal trading activity in the first quarter as portfolios were readjusted and price momentum was extremely perverse. On January 2nd, the Quant Fund lost 25 basis points of relative performance. As a result, Staff has implemented a new risk metric to help anticipate some types of factor reversals. In addition, Staff has also started using a new risk model in the portfolio optimization program that the Quant Fund utilizes. Previously, long term risk model had been used but this model has been augmented with a shorter horizon model. Having two models to compare should allow Staff to better respond to quickly changing market environments and more readily spot “error maximization” anomalies that sometimes crop up in the output from such software. Mr. Robinson concluded by noting that there seems to be no end to the current situation in which macroeconomic and political concerns are such prominent drivers in the market.

Roy Wellington stated that the Sector Fund team continues to expect economic recovery, with minimal inflation pressure. The rapid rebound in equity prices during the quarter was due largely to the actions of the European Central Bank in restoring liquidity and confidence, which has run its course. Liquidity will not prevent a recession as overdrawn governments tighten their belts to maintain their credit worthiness. The main drama in asset markets has been the slow, drawn out default of the Greek government, and the questionable condition of Italy, Spain and Portugal. He noted that the U.S. economy continues to experience modest improvement with lower unemployment but an overextended government. The Sector Fund is overweight the Consumer Discretionary and to a lesser extent Technology sectors. It reduced the underweights to Financials and Health Care but is keeping an underweight in the Energy and Materials sectors as the rest of the world slows down. Finally, he noted that there were no changes to the futures holdings but small cap as described by the S&P 600 Index continues to outperform the Russell 2000 Index.

Roy Wellington stated that the externally managed International Equity portfolio performed well overall during the quarter. In order for managers to outperform the benchmark, they most likely needed to overweight Europe, which is tough to do given the uncertainty. All but one EAFE manager outperformed the benchmark in the period. TCRS’s European manager (GE Asset Management) did well on both an absolute and relative basis, while TCRS’s small cap manager performance was mixed, with Pyramis outperforming and American Century underperforming.

Mr. Palmer reviewed the performance of the Domestic Fixed Income, Inflation Protected and International Fixed Income portfolios. The Domestic Fixed Income Portfolio produced a return for the quarter of 0.22% which was 1.12% in excess of the Citigroup Large Pension Fund Index. Mr. Palmer noted that the market environment was beneficial for the posturing of the portfolio as interest rates rose and all non-Treasury sectors produced positive excess returns. All of the component sub-portfolios (Government 1-5, Government 5+, Corporate and Mortgage) outperformed their respective indices. In general, the performance was achieved through adding

to underperforming securities in the fourth quarter and benefitting as those securities recovered during the quarter. Looking forward to the April-June quarter, most of those trades had been unwound to leave the overall portfolio with a low relative risk position.

Mr. Palmer noted that the Inflation protected portfolio performed in line with its index during the quarter and the International Portfolio benefitted from underweight positions in Euro and Yen currency bonds and strong performance from the Canadian Dollar, the Norwegian Kroner and the British Pound. These holdings helped the International Portfolio outperform by 75 bps for the quarter.

Mr. Palmer also reported on the Fixed Income Derivative, Currency Forward and Mortgage TBA activity for the quarter. Fixed Income Derivative positions performed as expected during the quarter. Derivatives were used to replicate the interest rate exposures in the benchmark index and to hedge specific interest rate risk in individual credit securities.

Peter Katseff provided an update on the Real Estate portfolio. He began by reviewing the differences in markets termed “24/7”, such as New York and San Francisco, and the next tier of primary markets, such as Dallas and Chicago. He noted that TCRS owns fewer assets in “24/7” markets, which are currently outperforming other markets. He noted that since the previous IAC meeting, TCRS closed on an apartment community in Dallas and expects to close on another apartment community in Houston in a few days. The total combined value of these transactions is equal to approximately \$100 million. Further, TCRS is negotiating the acquisition of two student housing communities for an additional \$100 million and would close on these properties in the third quarter. Mr. Katseff stated that there was a reasonable chance that the Real Estate portfolio could reach 5% of the TCRS portfolio by the summer of 2013.

In the absence of Lamar Villere, Mr. Brakebill provided an update on the Private Equity program. He stated that Private Equity is expected to close on four new funds in the next few months raising the total commitment to approximately \$500 million. However, only approximately \$165 million has been called and invested. Finally, Mr. Brakebill noted that the current allocations are very different from long-run targets. Specifically, the long-run buyout allocation should be closer to 65% of the portfolio as opposed to the current allocation of 36%.

Tim McClure gave an update on trading for the quarter. He noted that Brad Pritchett was able to meet seasoned traders in Austin, Texas. Mr. Pritchett was exposed to some trading tools that should add value to the equity trading desk. He stated that trading was difficult during the quarter and trading costs were high universally. Still, the trading desk was able to trade over 480 million shares valued at over \$17 billion at a cost of 2.2 basis points as compared to the Abel Noser universe of equity trades.

Mr. Brakebill and the IAC members discussed their outlook for the economy and for investments. The meeting adjourned at 12:00 p.m.

Domestic Equity Portfolio Overview
Michael Keeler, CFA

TCRS North American Equity Funds

TCRS Cap Weights vs. S & P 1500 Composite

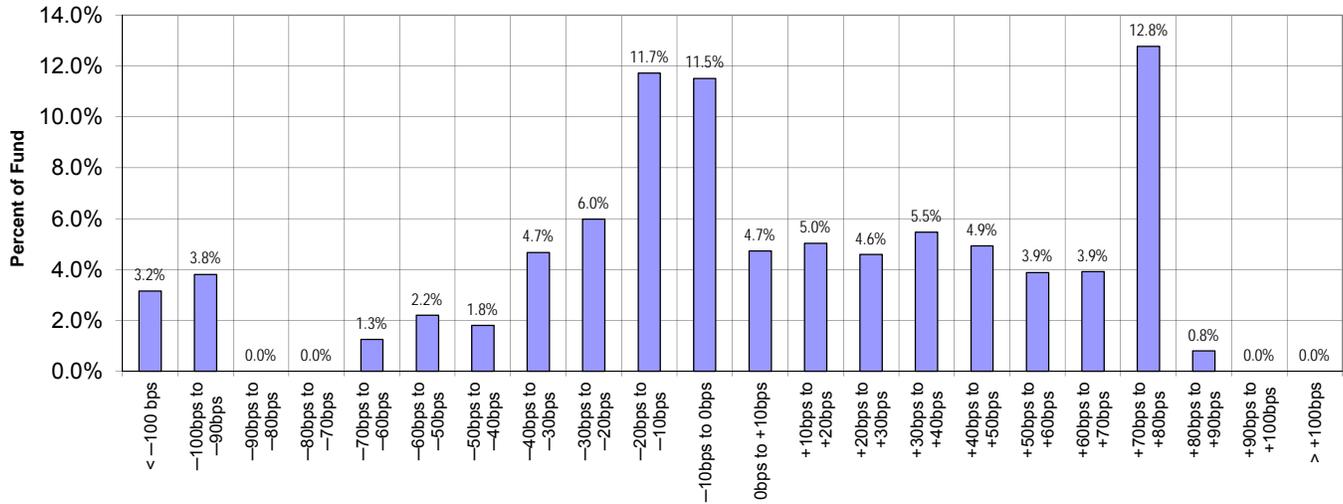

Stocks sustained their move up in the March quarter, mostly on three factors: 1) The continued better than expected economic data domestically (like in the previous quarter). 2) What were interpreted as positive developments concerning the European financial crisis? 3) The Fed announcing that they will keep interest rates low for as long as necessary, if not longer.

The Quant Fund turned in an 11.90% quarter, underperforming the S&P500's 12.59% return in the three months ended March 31, 2012. As depicted in the insert above, the models upon which the Quant Fund relies performed poorly in the quarter. At the top level model, F1-F10 return spreads were -0.69%, -0.35%, and 1.39% on a month-by-month basis. By model, the monthly IC's were -0.020, 0.032, and 0.045. The detail that really hurt performance was that at the decile level, results were non-monotonic. More so than the negative F1-F10 spreads, there was perverse behavior in the second and ninth deciles. Generally, the Quant Fund will own much in F2 which was the worst performing decile. The Quant Fund rarely owns anything in F9, and that was the quarter's best performer. Price Momentum was the worst behaved model. It appeared that from the first trading day of January-2012, everyone who underperformed in 2011 decided to buy the laggards from the prior year. The Quant Fund lost about 25 bps of relative performance in just one day on January 2nd.

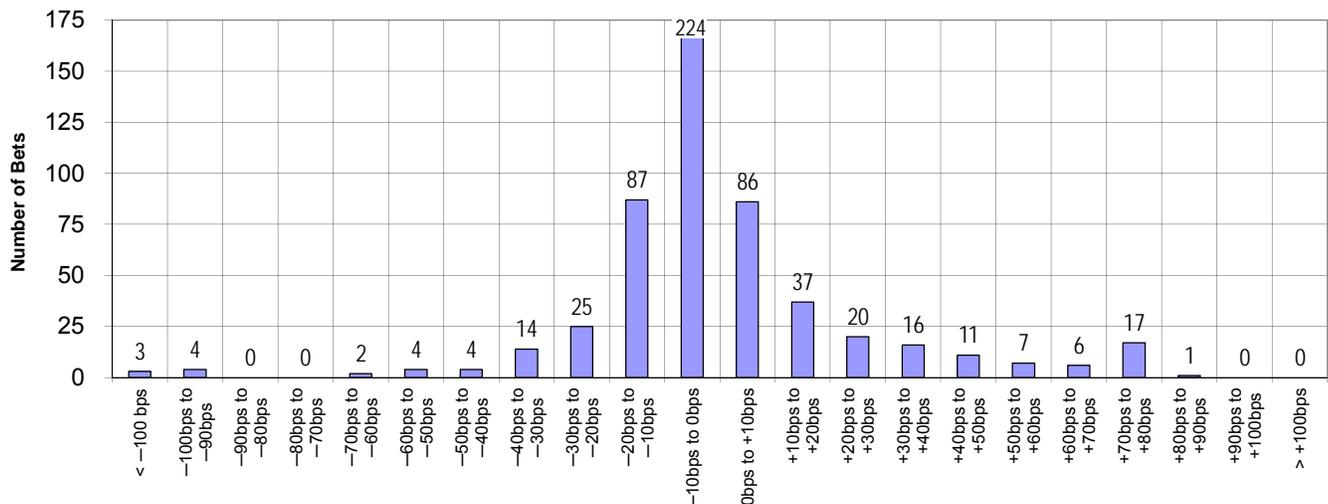

The stock market continues to look quite cheap versus bonds, but probably will until risk-free rates rise to where the latter do not appear to be return-free. The March end 801 bps equity risk premium generated by Merrill's DDM vs. AAA corporate yields is one of the highest readings on record going back to 1980.

Currently, the Quant Fund has a projected annualized tracking error of 1.71%, well within our risk target range. At 46.8%, APE is within tolerance.

The Sector Fund had its β (sector exposure) meeting on May18th. The Sector Fund is positioned for economic recovery: we neither expect a double dip nor are inflation pressures evident. The rapid rebound in equity prices was due largely to the actions of the European Central Bank in restoring liquidity and confidence and has run its course. Liquidity will not prevent a recession as overdrawn government tighten their belts to maintain their credit worthiness. The main drama in asset markets has been the slow, drawn out default of the Greek government, an ongoing process and the questionable condition of Italy, Spain and Portugal. Our economy continues to experience modest improvement with lower unemployment but an overextended government. We are overweight the Consumer Discretionary and to a lesser extent Technology sectors. We reduced the underweights to Financials and Health Care but are keeping an underweight in the Energy and Materials sectors as the rest of the world slows down.

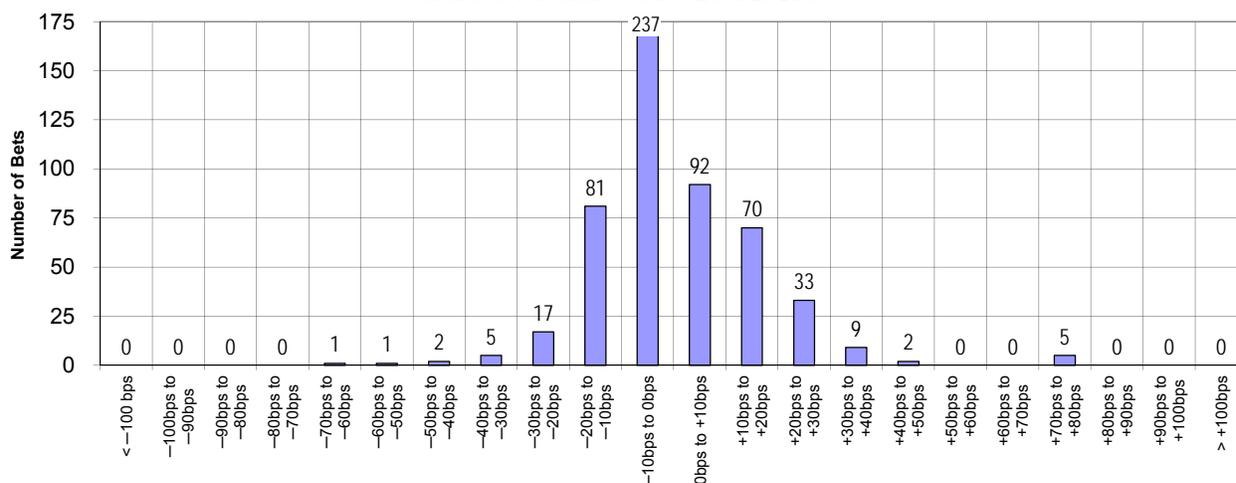

Comments around the table seemed consistent with a no recession, continued recovery, but no strong viewpoints. Caution on Europe was working to our favor; the slowdown in China was perhaps more than anticipated but there was little ill impact to the portfolio.

A representative trade for this quarter would be to avoid commodity producers and instead own the beneficiary of falling commodity prices. TCRS eliminated its holdings in the gold mines, first of all Newmont Mining: an industry that has benefited from easy money and stimulus but sometimes has problems with working for the shareholder. TCRS owned instead the oil refiners like Marathon Petroleum which could buy less expensive landlocked crudes while the market worried about new pipelines. The transition into a quality name that has worked well since the end of the quarter was messy.

Tracking Error

Forecasted Tracking Error	0.02%
Historical Tracking Error, TTM	0.06%
Value at Risk	\$685,900

Comments:

- Index Fund experienced the following funding flows in calendar 3Q11: \$250 million inflow on 8/3/11, \$250 million inflow on 8/8/11, \$250 million inflow on 8/12/11.
- Index Fund experienced the following funding flows in calendar 2Q11: \$150 million outflow on 4/5/11.
- Fund sold \$350 million in February to reduce overall plan equity allocation. February alpha number of (0.07%) was a result of trading impact for the allocation changes.
- Note on December 31 reported portfolio data: S&P made changes to the index on the close of 12/31/10 that were not incorporated into the fund until the next liquid trading day. Therefore, the risk forecasts and overweight/underweight table from the 12/31/10 IAC report are overstated. The performance impact from the timing discrepancy was nil.
- Due to a critical trading error in the issue CF Industries (Ticker: CF) as well as two unusually beneficial portfolio trades, Index Fund realized abnormally high tracking error in the 4Q FY10 period. The trading error was unwound opportunistically and processes were established to prevent similar errors in the future.
- Index Fund experienced the following funding flows in calendar 2Q10: \$200 million outflow on 4/29/10, \$250 million outflow on 4/16/10.
- Index Fund experienced the following funding flows in calendar 3Q09: \$100 million inflow on 9/24/09, \$100 million inflow on 7/29/09.
- April 2009 witnessed relatively large negative deviation from the index (-7 bps) due to a double corporate action by Time Warner, large banks raising substantial amounts of equity following the release of the infamous "stress test" results, the exit of Noble (which did not behave according to the empirically normative pattern for S&P 500 exclusions), and the tactical holding of Citi preferred shares rather than Citi common.
- Extraordinary positive tracking error was evident in the fund during March 2009 (25 bps). The deviation from benchmark returns in March primarily relates to good timing on a trade conducted March 2 and to class action litigation income posted to the fund.

Tennessee Consolidated Retirement System
 Private Equity Program
 Fiscal Q3 2012 Update
 Lamar Villere, CFA

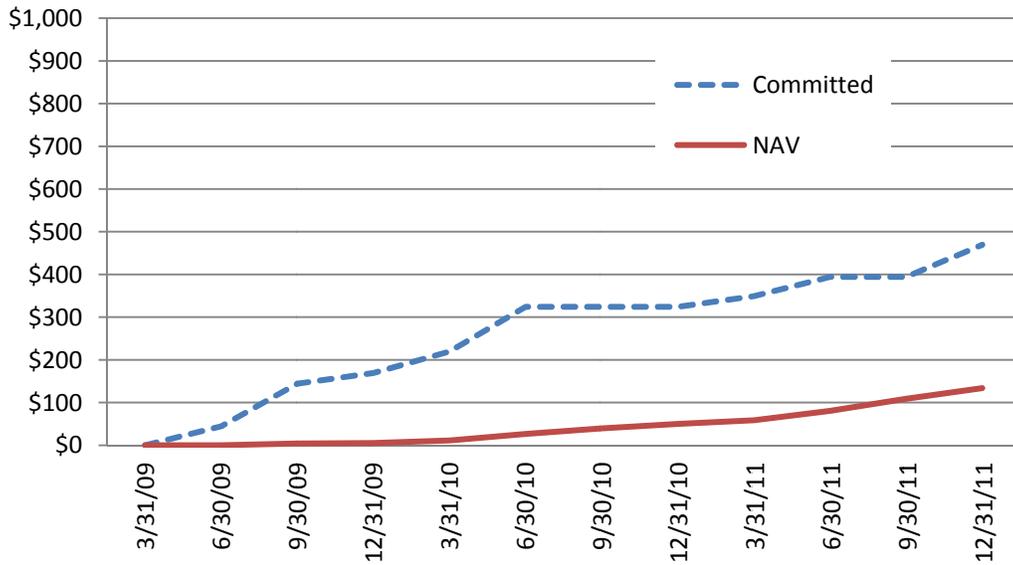

We have finalized our fiscal Q2:2012 results (12/31/11), and are pleased to report that the program continues to show positive returns. That said, early strong returns have begun to show the impact of the J-Curve, as most portfolio companies are still held at cost. Additionally, significant strength in the public markets negatively impacted our relative performance.

<i>IRR as of 12/31/12</i>	Quarter	Trailing 1 Year	Since Inception
Buyout	-0.4%	-4.1%	-3.7%
Credit	5.2%	1.3%	5.2%
Venture	<u>-4.3%</u>	<u>9.2%</u>	<u>9.7%</u>
TCRS PE Overall	1.1%	2.8%	5.6%
<i>S&P 500 + 3%</i>	<i>12.6%</i>	<i>6.9%</i>	<i>12.7%</i>

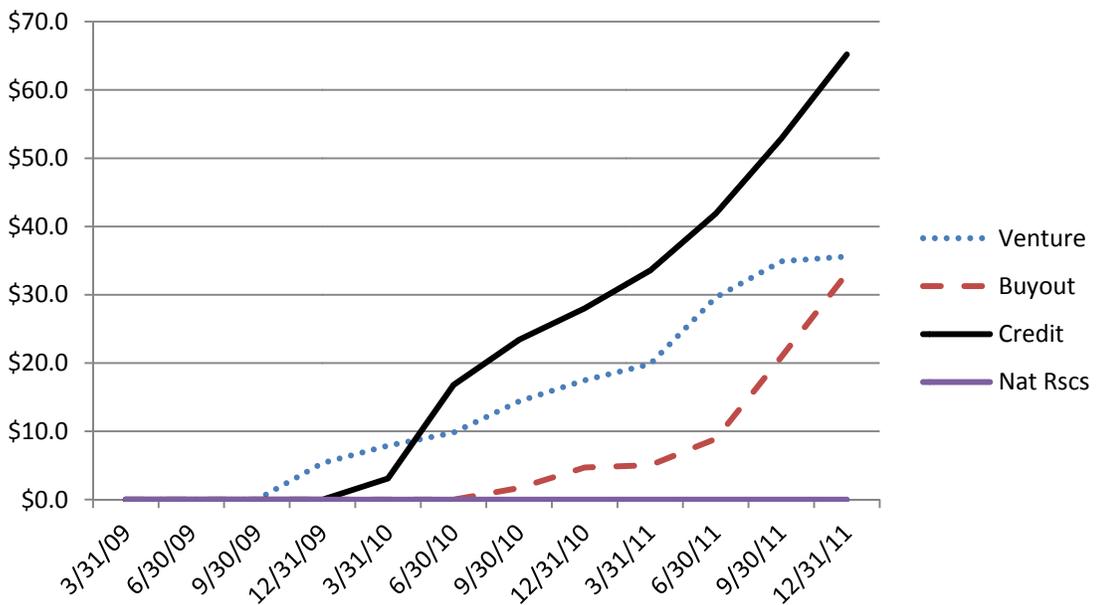

The overall portfolio is still over weighted to venture capital, a situation which should be reversed as the commitment pace in buyouts increases in the coming years. The following charts show the allocations to the sub-asset classes based on commitments, the overall portfolio size by both commitments and net asset value, and the net asset value of each sub-asset class over time.

Domestic Fixed Income Derivatives Report

Andrew C. Palmer, CFA

Domestic Fixed Income Derivatives Transaction Log

SUMMARY OF LAST QUARTER'S ACTIVITY:

CONTRACTS IN USE:

- 5-year Futures
- 10-year Futures
- Long Bond Futures
- Ultra-Long Futures
- Eurodollar Put

STRATEGIES:

- Used Ultra-Long, Long Bond and Ten-Year Futures to manage interest rate exposures in the 1-5 Gov't portfolio, the 5+ Gov't Portfolio and the Corporate portfolio and as part of the transition to the LPF Index.
- Rolled Ten-Year, Thirty-Year and Ultra Futures contracts in 5+ Gov't portfolio to replicate the duration profile of the index without using physical Treasury notes.
- Used Ultra-Long Bond Futures to offset the duration impact of a strategic overweight to the MBS portfolio.

EFFICACY:

- Futures positions performed as expected. The replication strategy produced returns similar to the LPF Government Index and the duration adjustment transactions produced the expected impact on interest rate sensitivity. The Eurodollar put option trade was held and still provides protection against a tightening of monetary policy and a widening in Eurodollar spreads.

PROPOSED STRATEGIES FOR CURRENT QUARTER:

- Use Ultra-Long, Long Bond and Ten-Year Futures to manage interest rate exposures in the 1-5 Gov't portfolio, the 5+ Government Portfolio and the Corporate portfolio.
- Use Ultra-Long Bond Futures to offset the duration impact of a strategic overweight to the MBS portfolio.
- Use Ultra-Long, Long Bond and Ten-Year Futures along with cash equivalents to replicate the duration profile of the LPF Government Index without using physical Treasury notes.
- Employ Ultra-Long, Long Bond, Ten-Year and Five-Year Futures in the Corporate portfolio to offset the duration impact of timing differences in individual corporate bond trades.
- Buying out-of-the-money calls or puts on long and intermediate Treasuries to hedge big movements in rates.

OPERATIONS UPDATE
Tim McClure, CTP

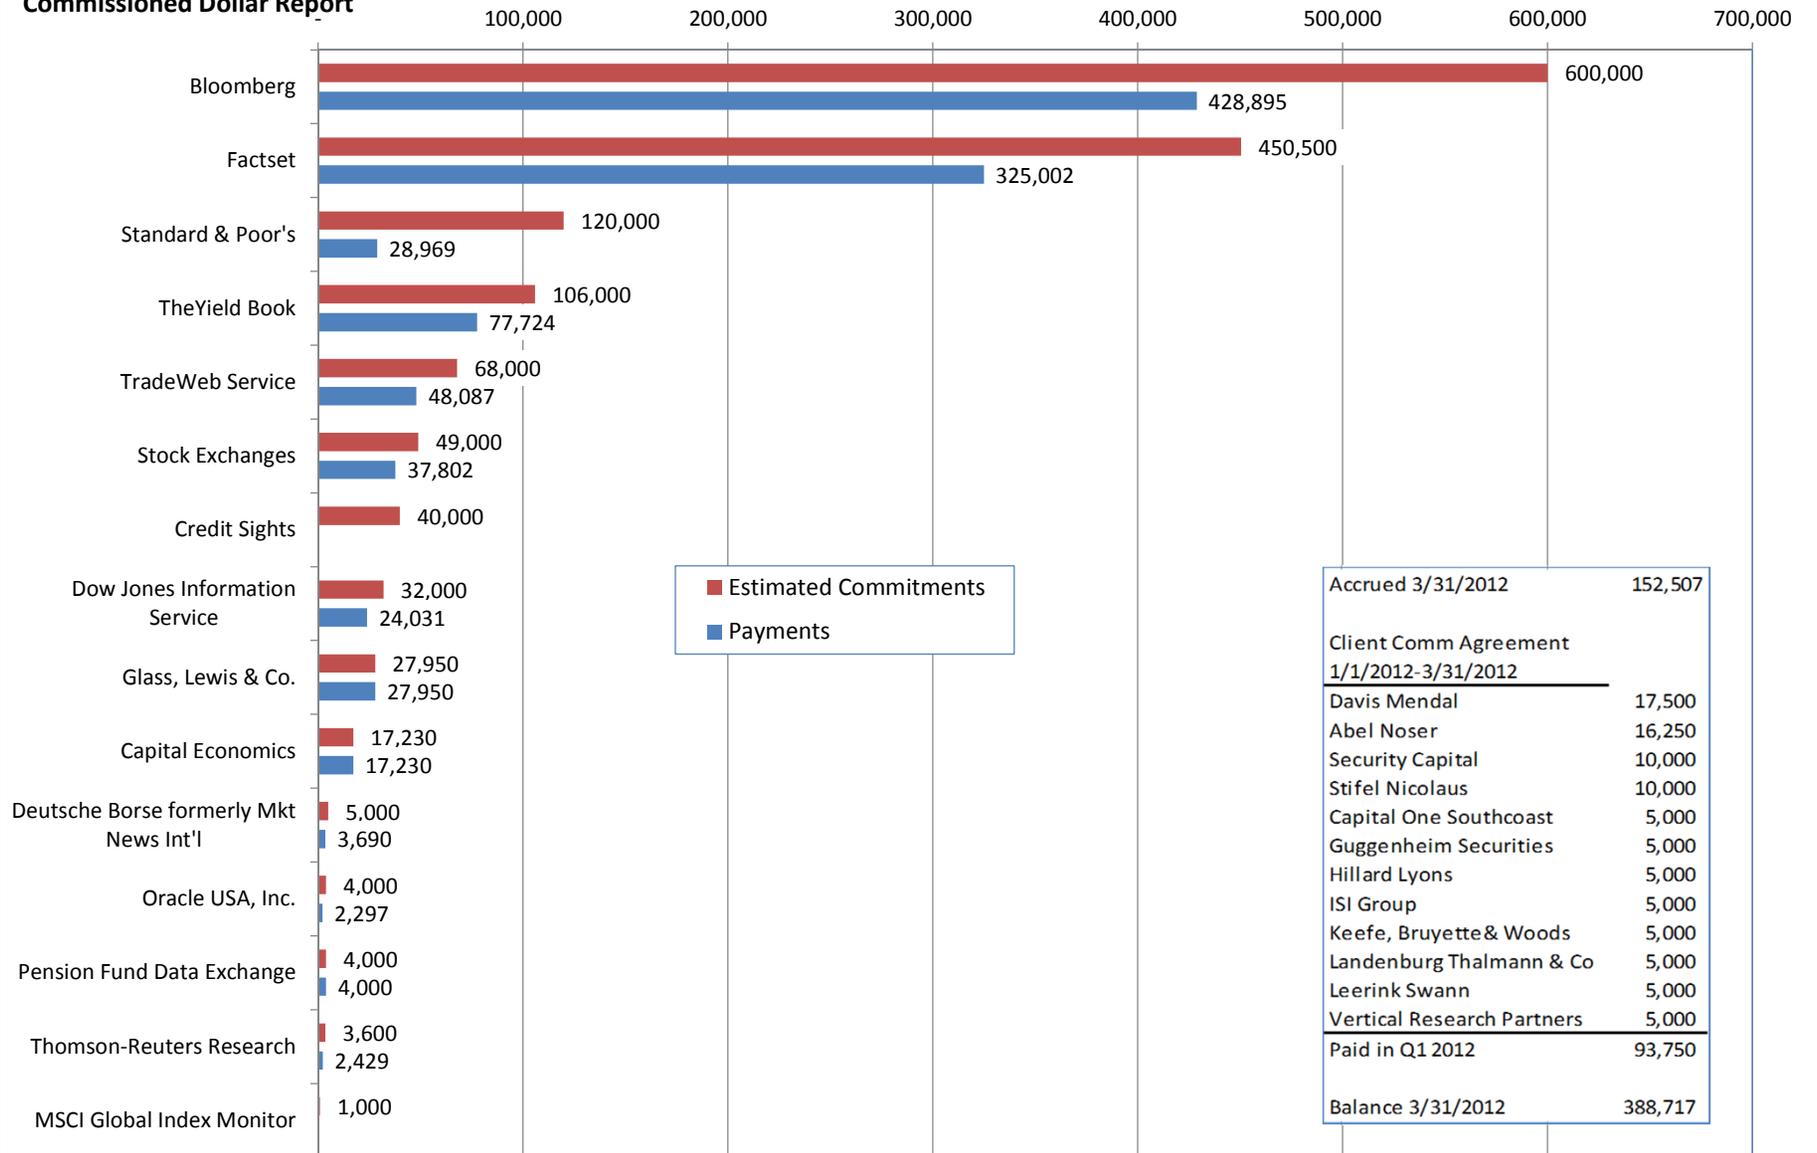

TCRS continues to move forward with changes to the Operations area. As TCRS looks for ways to add value to the Fund, this is an area that offers some opportunity for efficiencies and technology upgrades.

Trade Order Management System (OMS) – Paul Robertson has taken another position within State government. Until a replacement is named for the role of Compliance Manager, the pre-trade compliance module development is on hold for now. The OMS system continues to add value and stream line the entire trading process. Staff appears to be comfortable with the system and there seems to be very few issues.

Trading – Brad and Dianne have utilized the information available on Abel Noser (discussed later) and Bloomberg and continue to search for ways to reduce the costs associated with trading. Brad recently traveled to Austin for the NASIP conference with Andy Palmer and was able to incorporate visits with traders at Texas Teachers, Texas Employees, and Texas Permanent Fund. He was able to bring back several tips for more efficient use of the OMS as well as some ideas for office layout.

Trading Cost Analysis –The latest full quarter of time stamped data (January thru March 2012) has not been received as of the time of this writing. A meeting with Abel Noser staff has been set up for May 25, 2012, and the information obtained from that meeting will be distributed to the committee.
